

ING CHRISTIAN DJINGUET

Full Stack AI Engineer | DevOps Engineer | Fine-tuning and customizing RAG, Building Scalable and Secured AI-Powered Platforms with Java, Spring Boot, PHP, Laravel, React, Node.js, Python, Django, Infrastructure as Code

📞 673112163 @ cdjinguet@gmail.com 🔗 Here is my blog post <https://medium.com/@cdjinguet> 🔗 here is my portfolio website <https://my-mac-os-style-portfolio.vercel.app/>

SUMMARY

Full Stack AI & DevOps Engineer with 4 years of experience designing and delivering integrated AI-driven applications, cloud-native platforms, and automation systems.

Proven track record of improving performance, scalability, and operational efficiency across the full software lifecycle.

Technical expertise includes:

- Frontend:
 - Responsive, production-grade interfaces using React, Next.js, and TypeScript.
- Backend:
 - API and service architecture with Node.js, Python, Java (Spring Boot), PHP (Laravel), Express, and FastAPI.
- AI Engineering:
 - Production AI features leveraging OpenAI API, prompt engineering, RAG pipelines, LangChain, LlamaIndex, and vector search.
- Databases & System Design:
 - PostgreSQL, MySQL, MongoDB, Redis; design focused on performance, security, observability, and maintainability.
- DevOps & Cloud:
 - Docker, Kubernetes, Terraform, GitHub Actions, AWS, Azure, GCP; CI/CD pipelines and infrastructure automation.

Impact:
Contributed to high-impact teams at Analytix Hive, TripValue, ClimateWavers, and Aquila Cyber — delivering scalable systems, reducing release friction, improving service reliability, and automating manual workflows.

Career Focus:
Passionate about building technically rigorous products where AI, software engineering, and infrastructure converge to drive measurable business value.

EXPERIENCE

DevOps Engineer

Chowdeck

📅 06/2025 - 04/2026 📍 Southwest, Cameroon

- Built and managed environments to fulfill PCI DSS compliance requirements and wrote internal tools in Go.
- Implemented and managed policy as code using Open Policy Agent (OPA), Conftest, and Gatekeeper.
- Implemented AWS serverless applications using a serverless framework and implemented and managed Amazon EKS clusters.
- Migrated and implemented centrally templated Helm Charts to assist in deploying 100+ microservices in different AWS EKS clusters.
- Assisted the company in implementing a scaled system design and implemented AWS Secrets Manager and Vault to secure secret data.
- Implemented progressive deployment using Argo CD and Argo Rollouts for blue-green and canary deployments.
- Used a GitHub Actions self-hosted runner to enable secured and private E2E testing.

KEY ACHIEVEMENTS

- 💎 **Improved Deployment Efficiency**
Increased deployment efficiency by 30% through implementing CI/CD pipelines.
- 💎 **Enhanced Reliability**
Reduced application downtime by 50% using Kubernetes and Docker.
- 💎 **Improved Model Accuracy**
Boosted model accuracy by 15% with optimized data pipelines.
- 💎 **Cost Optimization Achievement**
Saved 20% in hosting costs by migrating to a containerized platform.

EXPERIENCE

Full Stack AI Engineer

Food Concepts PLC

📅 01/2023 - 07/2024 📍 Nigeria

- Built predictive models to provide useful insight into the client's product.
- Set up Airflow to automate ETL workflow to support automated model deployment.
- Implemented a messaging queue to manage model training jobs.
- Built dataset annotation system. Developed both client and server-side applications.
- Developed RESTful web service endpoints for object detection and ECG classification models.

DevOps Engineer

Boomplay

📅 06/2023 - 01/2024 📍 Nigeria

- Maintained availability, latency, scalability, and efficiency of standardized container compute platform for Google corporation engineering teams.
- Developed and maintained automation pipelines using internal tools for platform lifecycle management.
- Designed and developed a Go package for monitoring machines utilizing IPMI.
- Developed and maintained monitoring and alerting pipelines.
- Automated the migration of virtual machine instances from an outdated virtualization platform to a modern containerized compute platform.
- Participated in teams on-call and interrupt rotations.
- Developed a solution to enforce Google VM usage policy on VMs hosted on a new containerized compute platform.
- Designed automated processes to mitigate the recurrence of emergent service issues.
- Created a solution for automating firmware and security patch updates across numerous machine fleets spanning multiple regions, catering to the new containerized compute platform.

Full Stack AI Engineer

Freelancer/Self-employed

📅 01/2023 - 06/2023 📍 Nigeria

- Implementing key features, including recurring invoice payments and enhancing the app's functionality for managing subscriptions and automated payments.
- Utilizing Flutter for mobile development and Laravel for the back end, ensuring seamless performance across iOS and Android platforms.
- Integrating Material UI to provide an intuitive and visually appealing user interface, significantly improving the user experience.
- Optimizing performance and conducting thorough testing resulting in successful releases of versions for the stores, exceeding user expectations and garnering positive feedback for usability improvements.
- Developing a robust microservice architecture using Node.js with Express to handle socket connections, enabling real-time communication within the app.
- Leveraging Redis for connection management and RabbitMQ for message brokering to create a scalable and resilient system that efficiently supports high volumes of concurrent users.

DevOps Engineer

Jiji.ng

📅 06/2022 - 01/2023 📍 Nigeria

- Designed and maintained a DevOps tool controller, which helped improve the automation and efficiency of deploying and managing DevOps tools.
- Developed, deployed, and maintained the Swisscom large GCP/AWS infrastructure.
- Developed and maintained in-house tools like an LDAP proxy, Bitbucket CLI, and Snyk report extension.
- Developed AWS service catalog products like Argo CD, Flux, and Amazon EKS with Python and CDK.

Full Stack AI Engineer

Freelance | Self-Employed

📅 01/2022 - 12/2022 📍 Ghana

- Resolved multiple critical bugs in the app, significantly improving user experience and stability.
- Implemented Sentry for error tracking, enabling real-time monitoring and faster issue resolution.
- Integrated Firebase services enhance app functionality and enable robust data management.
- Fixed admob-related issues, ensuring smooth ad display and increased revenue stability.
- Improved overall app stability, resulting in a more reliable and user-friendly experience.

PROJECTS

My Portfolio Website Containing All My Projects

A fully functional macOS-inspired portfolio OS built with React, Vite, & SCSS. Features draggable windows, dock physics, and an interactive terminal.
